INVESTMENT THESIS

- Largest US nuclear fleet (21% PJM capacity) = irreplaceable clean baseload monopoly in power-starved grid
- AI/data center demand inflection: US DC load 33-120 GW by 2030; CEG best positioned with 24/7 carbon-free power
- Calpine deal (closed Jan 2026): 55 GW combined, >20% EPS accretion, +2BannualFCF, 300M cost synergies
- PJM capacity prices 10x'd (29-333/MW-day) with supply deficit of 6.6 GW; nuclear clears every auction
- Crane Clean Energy Center (TMI restart): 835 MW online 2027, 1.6Binvest, 20-yrMicrosoftPPA + 1B DOE loan

PEER VALUATION COMP

	CEG	VST	NRG	TLN
Mkt Cap (\$B)	\$104	\$89	\$32	\$10
Fwd P/E	27.0x	15.5x	16.3x	18.5x
EV/EBITDA	15.9x	11.2x	10.2x	12.8x
D/E Ratio	0.63	3.12	6.15	2.80
ROE	22%	72%	64%	45%
Div Yield	0.6%	0.8%	1.1%	0.0%
1Y Return	+78%	+95%	+42%	+55%

CEG commands premium on nuclear scarcity + clean energy moat

US DATA CENTER POWER DEMAND (GW)

CATALYSTS & UPCOMING EVENTS

- Feb 24 Q4 2025 earnings + FY26 guidance (post-Calpine)
- Q1 26 First combined CEG+Calpine segment reporting
- H1 26 Potential new data center PPAs (CyrusOne +others)
- 2027 Crane Clean Energy Center (TMI) restart: +835 MW
- 2027+ Nuclear uprates: ~1.3 GW incremental capacity
- Ongoing IRA Section 45Y PTC: ~\$30/MWh nuclear tailwind
- Ongoing PJM capacity repricing higher (supply deficit)

TECHNICAL SETUP

- 50-DMA: 238|200—DMA:211 | Both BELOW price
- RSI(14): ~31 (near oversold) - potential entry zone
- Support: \$272 | Resistance: \$325 | ATH: \$413
- Golden cross intact; pullback from ATH = -30%
- Consensus: 14 Buy / 0 Sell | Avg PT \$407 (+42%)

FINANCIAL SNAPSHOT

Metric	FY2024	FY2025E	FY2026E
Revenue (\$B)	\$23.6	\$24.6	\$36.0*
Adj. EBITDA (\$B)	\$4.5	\$5.4	\$8.5*
Adj. EPS (\$)	\$11.91	\$9.25	\$11.0
FCF (\$B)	\$1.8	\$2.1	\$4.0*
Net Debt (\$B)	\$3.2	\$16.4†	\$15.0†
EBITDA Margin	19%	22%	24%
Net Debt/EBITDA	0.7x	3.0x†	1.8x†

*Incl. Calpine †Pro forma w/ Calpine debt

PJM CAPACITY PRICING (\$/MW-day)

CEG GENERATION MIX (55 GW POST-CALPINE)

KEY RISKS

- [HIGH] Calpine integration execution; \$300M synergy target
- [HIGH] Elevated valuation (27x fwd P/E) vs peers (16x avg)
- [MED] Pro forma leverage jump 0.7x-3.0x net debt/EBITDA
- [MED] Nuclear regulatory/operational risk (NRC relicensing)
- [MED] Power price/spark spread normalization risk
- [LOW] Political risk to IRA nuclear credits (bipartisan)
- [LOW] AI demand slowdown / hyperscaler capex pullback

BULL \$480+ (67%↑)

- ▲ Nuclear scarcity premium re-rates higher
- ▲ Calpine synergies beat >\$300M target
- ▲ New mega data center PPAs announced

BEAR \$180 (37%↓)

- ▼ Multiple compression to peer avg (16x)
- ▼ Capacity price reversal / regulatory change
- ▼ Integration stumbles + leverage concerns
